**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4, 6-8, 10-11 and 19-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iida et al. (US 5,644,157) in further view of Yamazaki et al. (US 6,515,334).

Iida discloses the limitations of:

A first conductor (8 (of T2), fig. 25) formed through said first wafer;

A first conductor insulating layer (9b (of T2), fig. 25) formed through said first wafer, said first conductor insulating layer engaging said first conductor and disposed between said first conductor and material of said first wafer, said first conductor insulating layer being formed of dielectric material; and

A first outer insulating layer (9a (inner wall of T1), fig. 25) formed at least partially through said first wafer and spaced from said first conductor insulating layer, said first outer insulating layer being formed of dielectric material.

A second outer insulating layer (9a (outer wall of T1), fig. 25) formed through said first wafer (14, Fig. 25) and spaced from said first outer insulating layer;

Wherein said first conductor extends through said first wafer from said first side to said second side (col. 10, lns. 11-24).

Art Unit: 2812

It would have been obvious to one having ordinary skill in the art at the time the invention was made to form a second conductor and another device like the one described above, since it has been held that mere duplication of essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

lida does not disclose the claimed limitation(s) of:

layer wafers and connect them.

However, Yamazaki discloses to layer wafers and connect them to form a compact device (fig. 3(A); col. 5, Ins. 15-45).

Therefore one of ordinary skill in the art would stack two devices to connect them electrically. It is inherent that cutting a wafer along the axis of the device through the outer insulating layer that the sidewall will intersect and will be the periphery of the dice.

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1-4, 6-8, 10-11 and 19-33 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2812

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
